

## Filling connections straight

**Filling connections straight can be used with grease filling pumps without stub**

**Steel zinc / steel zinc-nickel / CrVI free**

Item No.	L	L1	G	G1	SW	Bag	Box
100-202	38	26	M 22 x 1,5	M 26 x 1,5	27	5	50
100-202-1	55	43	M 22 x 1,5	M 26 x 1,5	27	5	50
100-202-2	75	63	M 22 x 1,5	M 26 x 1,5	27	5	50
100-207	60	48	M 20 x 1,5	M 26 x 1,5	27	5	50

Basically is filling connection straight a connection piece between the grease filling pump and the grease pump in lubricating technology. Filling connections straight are mainly used with filling pumps in order to make a dust-free filling of the grease reservoir.

The grease gets out of the grease filling pump and through the 90° filling connection in the grease reservoir of the pump. After the grease reservoir of the pump is filled, the filling connection will be closed and the single lubrication points can be supplied again with grease. Depending on the position or the accessibility of the grease pump, straight or elbow filling connections are used.
